Predicted Areas of Concern for Agricultural Products

**Notes:**
- Relocation addresses only increased cancer risk due to long term exposures.
- Predicted dose assumes unsheltered individual with no protective actions or mitigation.
- First-Year zone decreases in size with time, because dose received in the past and before the relocation is not included. Protective actions are based only on dose that can be avoided.
- Individuals may have received a much higher total dose if present since detonation time.

**Assumptions:**
- Assumes 10 kt detonation at 0 ft elevation.
- Areas shown are model predictions based on an estimated source term; confirm with measurements.
- Model assumes that no shelter or other protective actions have been taken to decrease exposure.

**PRODUCE RESTRICTIONS**
Produce ready for harvest in this area may exceed FDA's default food safety guidelines [projected from equivalent exposure rate DRL (5.4 uR/hr)] for the most limiting nuclide (I-131).
Area: 754,000 km²  Extent: 1406 km

**MILK RESTRICTIONS**
Milk from cows pastured in this area may exceed FDA's default food safety guidelines [projected from equivalent exposure rate DRL (4.6 uR/hr)] for the most limiting nuclide (I-131).
Area: 813,000 km²  Extent: 1610 km
